

about 120 Mb/year. The ratio of this raw rate to finished data rate should improve dramatically and may approach 50 Mb/year for a single instrument. In this case, ten instruments could provide the rate required by the Human Genome Project at a cost of 0.2 cent per base. Although this rate would not include the cost of sample preparation and data analysis, the rate and cost of raw sequence determination would no longer be the limiting feature.

It should be understood that this invention has been disclosed so that one skilled in the art may appreciate its features and advantages, and that a detailed description of specific components and the spacing and size of the components is not necessary to obtain that understanding. Many of the individual components of the mass spectrometer are conventional in the industry, and accordingly are only schematically depicted. The foregoing disclosure and description of the invention are thus explanatory, and various details in the construction of the equipment are not included. Alternative embodiments and operating techniques will become apparent to those skilled in the art in view of this disclosure, and such modifications should be considered within the scope of the invention, which is defined by the following claims.

What is claimed is:

1. A system for analyzing a plurality of samples, comprising:
 - a plurality of portable sample supports each having a sample receiving surface thereon for accommodating a plurality of samples each at a fixed location on each sample support;
 - identification means for identifying each sample location of each of the plurality of samples on each of the plurality of sample supports;
 - a mass spectrometer for analyzing each of the plurality of samples on each sample support, the mass spectrometer having a sample receiving chamber therein for receiving each sample support;
 - a laser source for striking each sample on each sample support while within the receiving chamber with a laser pulse to desorb and ionize sample molecules;
 - support transfer mechanism for automatically inputting and outputting each of the sample supports from the sample receiving chamber of the mass spectrometer;
 - a powered mechanism movable in both an x direction and a y direction perpendicular to the x direction within the sample receiving chamber for supporting a respective sample support thereon;
 - a vacuum lock chamber connected to the sample receiving chamber of the mass spectrometer for receiving the sample supports and for maintaining one or more of the sample supports within a vacuum controlled environment while the plurality of samples on another of the sample supports are struck by laser pulses; and
 - computer means for recording test data from the mass spectrometer for each of the plurality of samples on the sample supports as a function of the identification means.
2. The system as defined in claim 1, further comprising:
 - a sample loading mechanism for positioning each of a plurality of liquid samples on the sample receiving surface of each of the plurality of sample supports; and
 - a curing chamber for drying each of the plurality of liquid samples on each of the sample supports to form a plurality of solid samples each positioned on a respective sample support.

3. The system as defined in claim 2, further comprising:
sample support positioning means for positioning each
liquid sample on the sample receiving surface of a
respective sample support.
4. The system as defined in claim 2, further comprising: 5
a sample preparation mechanism for automatically pre-
paring each of the plurality of liquid samples for a
deposit on a respective sample support.
5. The system as defined in claim 4, wherein the sample
preparation mechanism includes a first plurality of contain- 10
ers for receiving respective dilutions and a second plurality
of containers for receiving respective matrixes for preparing
each of the plurality of liquid samples each containing a
selected dilution.
6. The system as defined in claim 5, further comprising: 15
valve means responsive to the computer means for auto-
matically controlling the flow of fluids from the first
and second plurality of containers.
7. The system as defined in claim 1, further comprising:
a pump responsive to the computer means for pumping 20
liquid samples to a respective one of the sample sup-
ports.
8. The system as defined in claim 7, further comprising:
a drying chamber for drying liquid samples on each of the
sample supports to form dried samples. 25
9. The system as defined in claim 8, further comprising:
vacuum means for controlling a vacuum within the drying
chamber in response to the computer means.
10. The system as defined in claim 1, wherein each of the
plurality of portable sample supports comprises an electri- 30
cally conductive sample plate having a plurality of prede-
termined sample positions on the sample receiving surface.
11. The system as defined in claim 10, wherein each of the
plurality of predetermined positions on the sample plate
includes a well for receiving a respective sample.
12. The system as defined in claim 11, wherein each of the 35
plurality of wells on the sample plate are arranged in one of
a plurality of rows and in one of a plurality of columns.
13. The system as defined in claim 1, wherein:
the identification means includes a marking on each
sample support for identifying each of the plurality of 40
samples on the sample receiving surface.
14. The system as defined in claim 1, wherein a sample
support includes a magnetic handle for cooperating with the
support transfer mechanism to position the sample support.
15. The system as defined in claim 1, wherein each of the 45
plurality of sample supports includes a sample holder and a
plurality of pins each removably positionable with respect to
the sample holder, each of the plurality of pins having a
sample receiving surface thereon for receiving a respective
one of the plurality of samples.
16. The system as defined in claim 1, wherein each of the 50
plurality of sample supports has one or more locating
members for precisely positioning the sample support.
17. The system as defined in claim 1, wherein each of the
sample supports comprises in excess of 80 determined 55
sample positions on the sample receiving surface.
18. The system as defined in claim 1, further comprising:
sample support identification means for identifying each
of the plurality of sample supports and for inputting
sample support identification information to the com- 60
puter means.
19. The system as defined in claim 1, further comprising:
a sample storage chamber for storing one or more of the
plurality of sample supports; and
a powered transporter for transporting each of the plural- 65
ity of sample supports from the sample storage cham-
ber to the vacuum lock chamber.

20. The system as defined in claim 19, wherein the powered transporter is automatically responsive to the computer means.

21. The system as defined in claim 19, further comprising:

a transport cassette for supporting a plurality of sample supports each in a preselected position within the sample storage chamber.

22. The system as defined in claim 21, further comprising:

a transport drive mechanism for selectively positioning the transport cassette within the sample storage chamber.

23. The system as defined in claim 22, wherein the transport drive mechanism is powered in response to the computer means.

24. The system as defined in claim 23, wherein the transport drive mechanism comprises a lead screw and a stepper motor.

25. The system as defined in claim 1, further comprising:

a door member for selectively controlling communication between the vacuum lock chamber and the sample receiving chamber of the mass spectrometer.

26. The system as defined in claim 25, further comprising:

a sample storage chamber for storing one or more of the plurality of sample supports; and

another door member for controlling communication between vacuum lock chamber and the sample storage chamber.

27. The system as defined in claim 1, further comprising:

a pump for selectively evacuating the vacuum lock chamber.

28. The system as defined in claim 1, wherein:

each of the plurality of sample supports is moveable between the vacuum lock chamber and the receiving chamber of the mass spectrometer; and

a transporter for moving one of the plurality of samples supports within the vacuum lock chamber while the plurality of samples on another of the sample supports are being struck with laser pulses.

29. The system as defined in claim 1, further comprising:

a powered sample support transporter for moving one or more of the plurality of sample supports within the vacuum lock chamber.

30. The system as defined in claim 1, further comprising:

a vent valve for selectively venting the vacuum lock chamber to atmospheric pressure.

31. The system as defined in claim 1, wherein the support transfer mechanism is responsive to the computer means.

32. The system as defined in claim 1, wherein the support transfer mechanism includes a fluid cylinder and an actuator rod extending between the fluid cylinder and a respective sample support.

33. The system as defined in claim 1, wherein:

each of the plurality of sample supports includes an electromagnet secured thereto; and

power to each electromagnet is controlled in response to the computing means.

34. The system as defined in claim 1, wherein the x-y mechanism is an x-y table responsive to the computer means.

35. The system as defined in claim 1, further comprising:

an electrically conductive block within the sample receiving chamber for receiving a respective sample support; and

one or more insulating members electrically insulating the powered positioning mechanism from the electrically conductive block.

36. The system as defined in claim 35, further comprising:
a securing mechanism for temporarily affixing the position of a respective sample support with respect to the electrically conductive block.
37. The system as defined in claim 1, further comprising: 5
an attenuator for adjusting the intensity of a laser beam output from the laser source.
38. The system as defined in claim 37, wherein the attenuator is responsive to the computer means.
39. The system as defined in claim 1, where the computer 10
means interprets test data from the mass spectrometer.
40. A system for analyzing a plurality of samples, comprising:
a plurality of portable sample supports each having a 15
sample receiving surface thereon for accommodating a plurality of samples each at a fixed location on each sample support;
sample identification means for identifying each sample location of each of the plurality of samples on each of 20
the plurality of sample supports;
support identification means for identifying each of the plurality of sample supports; and
a mass spectrometer for analyzing each of the plurality of 25
samples on a respective one of the sample supports, the mass spectrometer having a sample receiving chamber therein for receiving a respective sample support;
a laser source for striking each sample on each sample support while within the receiving chamber with a laser pulse to desorb and ionize sample molecules; 30
support transfer mechanism for automatically inputting and outputting each of the sample supports from the sample receiving chamber of the mass spectrometer;
a vacuum lock chamber connected with the sample 35
receiving chamber of the mass spectrometer for receiving each of the sample supports and for maintaining one or more of the sample supports within a vacuum controlled environment while the plurality of samples on another of the sample supports are struck by laser pulses; 40
a sample storage chamber for storing one or more of the plurality of sample supports;
a powered transporter for transporting each of the plurality of sample supports from the sample storage chamber to the vacuum lock chamber; and 45
computer means for controlling the support transfer mechanism and for receiving information from the sample identification means and the support identification means for recording test data from the mass spectrometer for each of the plurality of samples on each of the sample supports. 50
41. The system as defined in claim 40 further comprising:
a sample loading mechanism for positioning each of a 55
plurality of liquid samples on the sample receiving surface of each of the plurality of sample supports; and
a curing chamber for drying each of the plurality of liquid samples on each of the sample supports to form a plurality of solid samples each positioned on a respective sample support. 60
42. The system as defined in claim 40, further comprising:
a pump responsive to the computer means for pumping liquid samples to a respective one of the sample supports. 65
43. The system as defined in claim 40, wherein each of the plurality of portable sample supports comprises an electri

cally conductive sample plate having a plurality of predetermined sample positions on the sample receiving surface.

44. The system as defined in claim 40, wherein:

the sample identification means includes a marking on each sample support for identifying each of the plurality of samples on the sample receiving surface.

45. The system as defined in claim 40, wherein a sample support includes a magnetic handle for cooperating with the support transfer mechanism to position the sample support.

46. The system as defined in claim 40, wherein each of the plurality of sample supports includes a sample holder and a plurality of pins each removably positionable with respect to the sample holder, each of the plurality of pins having a sample receiving surface thereon for receiving a respective one of the plurality of samples.

47. The system as defined in claim 40, wherein each of the plurality of sample supports has one or more locating members for precisely positioning the sample support.

48. The system as defined in claim 40, wherein each of the sample supports comprises in excess of 80 determined sample positions on the sample receiving surface.

49. The system as defined in claim 40, wherein the powered transporter is automatically responsive to the computer means.

50. The system as defined in claim 40, further comprising: a transport cassette for supporting a plurality of sample supports each a preselected position.

51. The system as defined in claim 50, further comprising: a transport drive mechanism for selectively positioning the transport cassette within the storage chamber; and the transport drive mechanism being powered in response to the computer means.

52. The system as defined in claim 40, further comprising: a door member for selectively controlling communication between the vacuum lock chamber and the sample receiving chamber of the mass spectrometer.

53. The system as defined in claim 52, further comprising: another door member for controlling communication between vacuum lock chamber and the sample storage chamber.

54. The system as defined in claim 40, further comprising: a powered sample support transporter for moving one or more of the plurality of sample supports within the vacuum lock chamber.

55. The system as defined in claim 40, wherein the support transfer mechanism includes a fluid cylinder and an actuator rod extending between the fluid cylinder and a respective sample support.

56. The system as defined in claim 40, wherein:

each of the plurality of sample supports includes an electromagnet secured thereto; and power to each electromagnet is controlled in response to the computing means.

57. The system as defined in claim 40, further comprising: powered positioning mechanism for selectively positioning each of the plurality of sample supports within the sample receiving chamber.

58. The system as defined in claim 57, further comprising: the powered positioning mechanism is an x-y table responsive to the computing means; an electrically conductive block within the sample receiving chamber for receiving a respective sample support; and

one or more insulating members electrically insulating the powered positioning mechanism from the electrically conductive block.

59. The system as defined in claim 40, further comprising:
an attenuator responsive to the computer means for
adjusting the intensity of a laser beam output from the
laser source.
60. A method of analyzing a plurality of samples within 5
a sample receiving chamber of a mass spectrometer, the
method comprising:
supporting each of a plurality of samples at a fixed
location on one of a plurality of sample supports; 10
identifying each sample location of each of the plurality
of samples on each of the plurality of sample supports;
providing a vacuum lock chamber for receiving the
sample supports and for maintaining one or more of the
sample supports within a vacuum controlled environ- 15
ment while the plurality of samples on another of the
sample supports are struck by laser pulses;
automatically inputting and outputting each of the sample
supports from the sample receiving chamber of the
mass spectrometer to the vacuum lock chamber; 20
moving each sample support within the sample receiving
chamber in both an x direction and a y direction
perpendicular to the x direction;
striking each sample on each sample support while within 25
the receiving chamber with a laser pulse to desorb and
ionize sample molecules; and
recording test data in a computer from the mass spec-
trometer for each of the plurality of samples on the
sample support.
61. The method as defined in claim 60, further compris- 30
ing;
positioning each of a plurality of liquid samples on the
sample receiving surface of each of the plurality of
sample supports; and 35
drying each of the plurality of liquid samples on each of
the sample supports to form a plurality of solid samples
each positioned on a respective sample support.
62. The method as defined in claim 61, further compris- 40
ing;
automatically preparing each of the plurality of liquid
samples for deposit on a respective sample support.
63. The method as defined in claim 60, further compris-
ing: 45
arranging each of the plurality of samples in each sample
support in a plurality of rows and in a plurality of
columns.
64. The method as defined in claim 60, wherein the step
of identifying includes: 50
marking each sample support for identifying each of the
plurality of samples.
65. The method as defined in claim 60, further compris-
ing:

forming in excess of 80 predetermined sample positions on each of the respective sample supports.

66. The method as defined in claim 60, further comprising:

storing one or more of the plurality of sample supports within a sample storage chamber; and

automatically transporting each of the plurality of sample supports from the sample storage chamber to the vacuum lock chamber in response to the computer.

67. The method as defined in claim 60, further comprising:

supporting each of the plurality of sample supports at a preselected position within a transport cassette.

68. The method as defined in claim 60, further comprising:

selectively positioning the transport cassette in response to the computer.

69. The method as defined in claim 60, further comprising:

controlling communication from within the vacuum lock chamber to the environment exterior of the vacuum lock chamber in response to the computer.

70. The method as defined in claim 60, further comprising:

moving a sample support with the vacuum lock chamber while the plurality of samples on another of the sample supports are being struck with laser pulses.

71. The method as defined in claim 60, further comprising:

controlling an x-y table in response to the computer for positioning the plurality of samples within the sample receiving chamber of the mass spectrometer.

72. The method as defined in claim 71, further comprising:

supporting each of the plurality of sample supports on an electrically conductive block within the sample receiving chamber; and

electrically insulating the x-y table from the electrically conductive block.

73. The method as defined in claim 72, further comprising:

temporarily affixing the position of a respective sample support with respect to the electrically conductive block.

74. The method as defined in claim 60, further comprising:

adjusting the intensity of a laser beam output from the laser source in response to the computer.
